

Managed Pentest Service for Web Applications

Managed Pentest Service for **Web Applications**

Our Managed Pentest for Web Applications identifies vulnerabilities in web applications regardless of the technology they are built with.

We find the vulnerabilities that real-world attackers are exploiting.

From SQL injection, to cross-site scripting (XSS), to the vulnerabilities listed in the OWASP top 10, our Managed Pentest for Web Applications identifies web application security issues so you, or your clients, can remediate them before attackers exploit them.

Cost \$350 USD

Australian and New Zealand customers are invoiced in their local currency at the prevailing USD exchange rate. GST is added to the above price for Australian customers.

Customers located in other countries in Asia-Pacific are invoiced in USD.

Payment is by bank transfer only.

What's included: (per Website)

- Managed Pen Test (Web Applications) (with false positive elimination)
- Web Vulnerability Scan (with results & recommended remediation task)
- Reporting: provided in PDF or HTML

Add the following services:

+ \$100 USD for **PCI Compliance Scan** (with results)

This Report is generated based on the PCI DSS classifications and cannot be used for compliance purposes. PCI DSS scans must be performed by an approved scanning vendor.

To proceed

Reply to this email with the following information:

1. Number of Websites
2. Website domain name/s
3. Full Company Name, Address
4. Contact Name, Telephone number, Contact email

An invoice will be generated and forwarded to you for payment. Once we receive payment we aim to have the Managed Pentest for Web Applications report sent to you within 2 business days
